

# Memorial Hermann Rehabilitation Hospital-Katy

At Memorial Hermann Rehabilitation Hospital-Katy, our patients come first. We provide care to individuals recovering from injuries or suffering from chronic diseases that have impaired their physical or cognitive functioning. Our hospital offers access to the most advanced, innovative rehabilitation services available, with a focus on personalized, patient-centered care.

## Inpatients Served In 2022

### Therapy Services

Individualized and group therapy  
Shown in hours and minutes, per patient, per week  
All patients

### Patient Satisfaction

Overall satisfaction with the program  
(Scale 0.00 - 4.00)

Along with individual and group therapy sessions, the hospital's weekend program also offers classes focused on family education, additional therapy needs; as well as, group and leisure activities, providing the necessary time and resources for our patients to achieve their discharge goals.

Data obtained from e-Rehab for reporting period CY2022. Stats include all patients.

Patient satisfaction surveys are one of the ways we measure how effective our programs are in helping patients achieve their functional independence goals and return to their communities.

Data obtained from IT HealthTrack for the reporting period FY2022.

(over)

The only freestanding inpatient rehabilitation hospital in west Houston, Memorial Hermann Rehabilitation Hospital-Katy offers 35 private rooms for patients recovering from illnesses or injuries suffering from chronic diseases that have impaired their physical and/or cognitive functioning. The inpatient program is designed to help patients reach optimal functionality following an injury or illness. Personal performance goals are incorporated into a customized rehabilitation treatment program. Team members at Memorial Hermann Rehabilitation Hospital - Katy are among the best trained and most experienced rehabilitation professionals.

### Rehabilitation Outcomes

The self care and mobility outcome measures are used to assess the progress of a patient’s functional skills such as dressing, bathing, and eating. They are also used to measure the effectiveness of rehabilitation care delivered by the rehab team; as well as, the effectiveness of the rehab program. This score is measured upon admission and again right before discharge. The difference between the two scores represents the patient’s functional gains achieved in response to an inpatient rehabilitation therapy program.

### Functional Improvements from Admission to Discharge

### Discharge Locations

Sometimes patients with medical complications have to return to an acute-care hospital for further medical care. When these transfers are not planned, they are defined as an unplanned acute-care admission.

Data from E-Rehab reporting for the reporting period of CY2022.
