

Child Patient Instructions

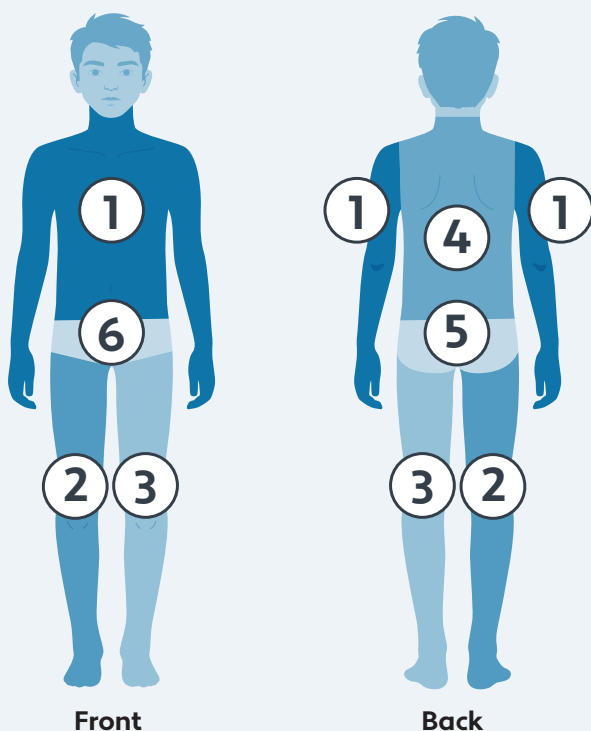

How to Use Chlorhexidine Gluconate (CHG) Soap Before Your Child's Procedure

Surgery may put your child at higher risk for infections. CHG is medical-grade soap that removes germs and helps prevent infection.

What will they need?

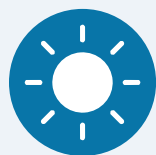

- Bottle of 4% CHG liquid soap
- Clean, newly laundered washcloth (non-cotton) or new mesh sponge
- Clean towel
- Clean pajamas and newly washed sheets

Wash body parts with CHG in this order:

The Night Before Surgery:

Help your child shower and put on clean pajamas. Make sure they sleep on clean sheets. Do not allow them to sleep with pets.

The Day of Surgery:

Help them shower, then dress in clean, warm, loose-fitting clothes or an inpatient gown. It is important for them to stay warm before surgery.

Showering With CHG Soap:

Divide the Soap

Use half the bottle the night before surgery and half the morning of surgery.

DO NOT use other soaps, shampoos, conditioners, creams or lotions.

Wash Their Hair and Face With Regular Soap

Wash your child's hair with their regular shampoo and use regular soap on their face. Rinse well.

DO NOT apply CHG to their face, hair, eyes or ear canals.

Wash Their Body With CHG Soap

Squeeze the soap onto a clean washcloth or new mesh sponge. Wash their body in the order shown in the diagram to the left.

Pay special attention to their:

- Neck (front and back)
- Armpits
- Skin folds
- Groin
- Between fingers and toes

Turn off water and continue lathering.

Leave Soap on Skin

Leave the CHG lather on your child's skin for 1-2 minutes before rinsing.

STOP using the CHG if you see a rash developing. Rinse CHG completely off skin and dry skin and skin folds thoroughly. Notify your child's health care team on the morning of their surgery.

Rinse Thoroughly

Rinse their body with warm water.

It may feel like there is still some CHG soap on your child's skin. This is normal. CHG continues to remove germs after their shower.

Dry With a Clean Towel

Use a clean towel to dry your child's skin and skin folds completely.

DO NOT apply lotions, moisturizers, perfumes, cologne, deodorant, powder or makeup after showering.

MEMORIAL
HERMANN

- **DO NOT** combine regular soap or shampoo products with CHG on the same body areas. These products may reduce the effectiveness of the CHG and irritate their skin.
- **DO NOT** shave, wax or use any hair removal products 48 hours before surgery. This will help to avoid skin irritation and decrease the chance of infection. If an area needs to be shaved for their surgery, it will be done at the hospital.
- **DO NOT** apply lotions, moisturizers, perfumes, deodorant, powder, cologne or makeup. CHG may not work as well if they use them.

Important Information:

- CHG replaces regular soap and water for bathing and shampooing.
- CHG is better than soap and water at removing germs and works for up to 48 hours.
- CHG is safe to use on normal skin and on surface wounds, rashes and burns.
- If they're not able to shower, they may use 2% CHG wipes. Dispose of CHG wipes in the trash can—**DO NOT flush**.
