TIRR Memorial Hermann Rehabilitation

TIRR Memorial Hermann-Southwest offers multidisciplinary inpatient medical rehabilitation. At TIRR Memorial Hermann-Southwest, our patients come first. We provide care to patients recovering from injuries or suffering from chronic diseases that have impaired their physical or cognitive functioning. Our rehabilitation unit offers access to the most advanced, innovative rehabilitation services available, with a focus on personalized, patient-centered care.

INPATIENTS SERVED IN FY2025

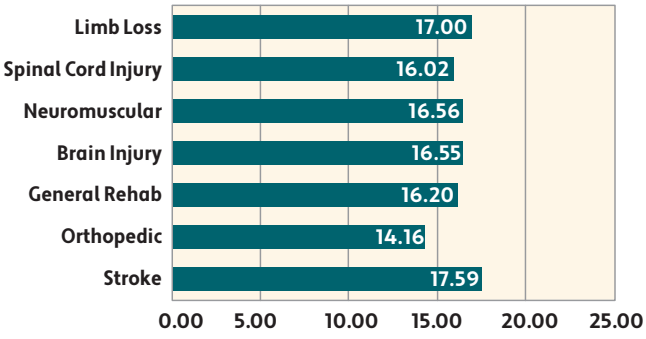
86	36	17	18	11	11	35
STROKE	ORTHOPEDIC	BRAIN INJURY	GENERAL REHAB	LIMB LOSS	NEURO-MUSCULAR	SPINAL CORD
Age Range 47 to 100	Age Range 26 to 92	Age Range 40 to 89	Age Range 59 to 90	Age Range 49 to 87	Age Range 49 to 82	Age Range 19 to 88

Therapy Services

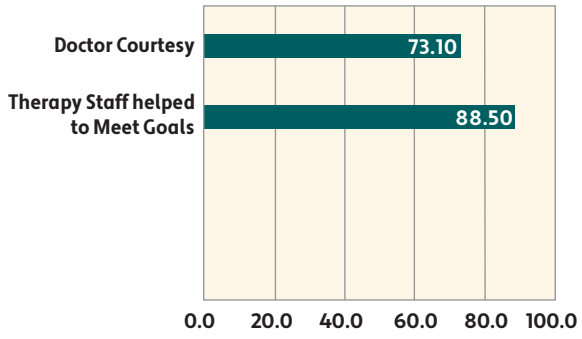


Individualized and group therapy
Shown in hours and minutes, per patient, per week
All patients

Along with individual and group therapy sessions, the hospital's weekend program also offers classes focused on family education, additional therapy needs; as well as, group and leisure activities, providing the necessary time and resources for our patients to achieve their discharge goals.

Data obtained from eRehabData for the reporting period of FY2025 and includes all discharge patients.

Patient Satisfaction



Overall satisfaction with the program
(Scale 0.00 – 100.00)

The Net Promoter Score provides a snapshot of our patients overall experience and how likely they are to recommend our facility.

Data obtained from Qualtrics for the reporting period of FY2025.

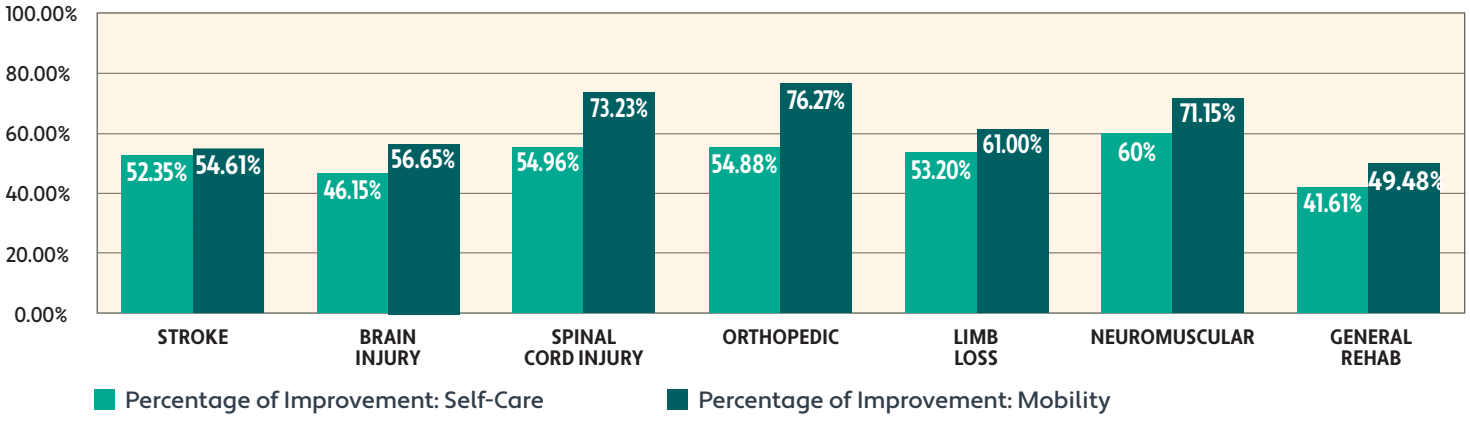
TIRR MEMORIAL® HERMANN
Rehabilitation

TIRR Memorial Hermann-Southwest is designed to help patients reach optimal functionality following an injury or illness. Personal performance goals are incorporated into a customized rehabilitation treatment program. Team members at TIRR Memorial Hermann-Southwest are among the best trained and most experienced rehabilitation professionals.

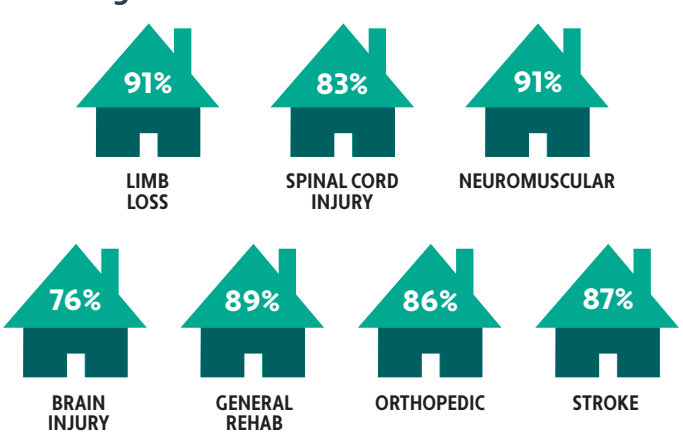
Rehabilitation Outcomes

The self-care and mobility outcome measures are used to assess the progress of a patient's functional skills such as dressing, bathing and eating. They are also used to measure the effectiveness of rehabilitation care delivered by the rehab team as well as, the effectiveness of the rehab program. This score is measured upon admission and right before discharge. The difference between the two scores represents the patient's functional gains achieved in response to an inpatient rehabilitation therapy program.

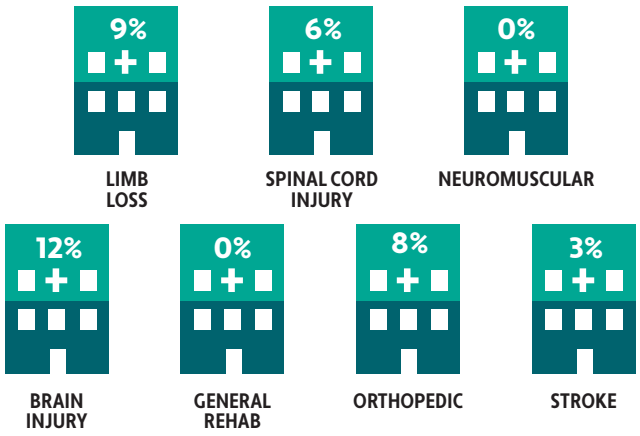
Functional Improvements from Admission to Discharge



Discharge Locations



Percentage of patients discharged to home or community



Percentage of patients discharged to an acute-care facility

Data from E-Rehab reporting for the reporting period of FY2025.

Sometimes patients with medical complications have to return to an acute-care hospital for further medical care. When these transfers are not planned, they are defined as an unplanned acute-care admission.
